String Lab

Create a new project named string_lab with a new class named StringLab. In your main method, call each of the below methods.

Make sure you use comments and correct java conventions.

1. Write a method that finds the length of your name & prints it to the console

2. Write a method that finds the first character of your name and prints it to the console.

3. Write a method that finds the character in the middle of your name and prints it to the console.

4. Write a method that gets the sub string from the beginning of your name to the middle of your name and prints it to the console.

5. Write a method that converts your lower case name to all upper case.
